## **Description of Position:** Database Modeler

Minimum of 8 years' experience with a Bachelor's degree in computer science or related field. Resource will work in a lead capacity, responsible for the fundamental organization of a system embodied in its components, their relationships to each other and to the environment, and the principles guiding its design and evolution in support of Basel II implementation. Will help create the conceptual, high-level, and detailed design of the software solution. Individual possesses extensive experience with multiple technical disciplines, across multiple platforms. Develops the logical data model (LDM) and assists the DBA in developing the physical data model (PDM). Facilitates JAD sessions to determine data rules, and holds LDM and PDM Reviews with Data SMEs. Applies Data Naming Standards, checks models in and out of Model Repository, and documents data model translation decisions. Includes use of data profiling tools and techniques, and development of review and QA data requirements.

### Required Skills:

1. Experience coordinating others work while involved with multiple work streams.
2. Demonstrated experience to influence and coordinate third parties and suppliers.
3. Ability to communicate strategies and processes around data modeling and architecture to cross functional groups and senior levels.
4. Ability to influence multiple levels on highly technical issues and challenges.
5. Logical Design Demonstrated experience with large scale, multiple business solutions across divisions or enterprise.
6. Demonstrated use of Zachman or RUP Framework.
7. Demonstrated experience with multiple platforms.
8. Experience working on a Basel II project.
9. Experience with Financial Services clients (Preferred).
10. Experience as a data analyst.
11. Demonstrated Data Modeling Tools ability with more than three tools.
12. Demonstrated experience to influence and coordinate third parties and suppliers.
